SUMMARY

I'm Suvira Patil, a proficient student in the IT department at Walchand Institute of Technology, skilled in C++, Java, and Python. I have studied honors in AI/ML, reflecting a strong academic foundation in these fields. Passionate about the web full stack domain, I am eager to apply my programming skills to develop innovative web applications. Currently seeking job or internship opportunities to contribute actively to web development projects and gain practical industry experience.

Projects

Temperature Converter

I designed and developed a Temperature Converter website using HTML, CSS, and JavaScript to enhance my proficiency in frontend web development. This interactive application allows users to convert temperatures between Celsius, Fahrenheit, and Kelvin with real-time updates. Leveraging HTML for structure, CSS for styling, and JavaScript for dynamic functionality, I prioritized user experience through responsive design and intuitive UI/UX principles. This project showcases my skills in frontend development and demonstrates my ability to create practical, user-friendly web applications.

The frantic run of the valorous rabbit

In this fast-paced game, players control a brave rabbit on a thrilling escape from a (not so evil) wolf. Initially starting slow, the game quickly escalates in speed, challenging players to navigate obstacles and collect rewards to survive. Designed for adrenaline-pumping excitement, it tests reflexes and strategy as players strive to outpace the relentless pursuit. This project showcases my ability to create engaging gameplay experiences and optimize user engagement through dynamic challenges and escalating difficulty levels.

ACHIVEMENTS AND OTHER EXPERIENCE

Participated in debate competition

Participated in Debate Competition organized by my college and was undefeated for 5 rounds but failed to qualify for finals as I lost in semis. The experience was exceptionally good as I tasted good and bad days together.

Certificates

- C,C++,Java - Infosys springboard certification
- Participated in online hackathon of SYNAPSE.
- Honors in AI/ML

Volunteers

- Volunteered ATHARAVA as a backstage coordinator.
- Volunteered Adventure Arena as a prop distributor.
